Re: Web Design:

I know a lot of you are search for great web design, from someone who can truly take your site and make it place high in search engine ranking. And although a number of factors are involved in doing just that, the number one attribute of a number one website is good design.

Are there enough bold tags? Are there proper descriptions? Is the keyword to title to description relevancy okay? Does it validate with the [W3C Validation Service?](#)

All these are good design questions, and the all have an answer, and it's unequivocally... **"Use Twilight Surfers Web Design & Development."**

With fifteen years of web design experience, TSD can take your website and transform it, or build a site from scratch using the newest techniques, methods, and technologies. We will guarantee our site perform better than any web design competitor.

All of our websites are hand-coded! You won't catch any of our designers using some WYSIWYG web editors, which can produce some awfully suspect code. Typically those type of programs are for novice web designers.

Only professional design and developed at TSD, and you can easily see the differences. Our designs are distinct, different, and unique, each and every one.

So if you need something that will come up in the top ten, and you need something that stands out visually, choose Twilight Surfers Development for all your company's web design needs.

It may sound like a cliché, but you will be glad you did.

Sincerely,

Steve Hill
Lead Designer,

Twilight Surfers Web Design & Development
